

SeedLabs for MAC

Step1: Install Vmware Fusion

1. First you need to install Homebrew and set its path. Follow instructions here:

https://github.com/seed-labs/seed-labs/blob/master/lab-setup/apple-arm/seedvm-v2/SeedVM-Fusion_Installation.md

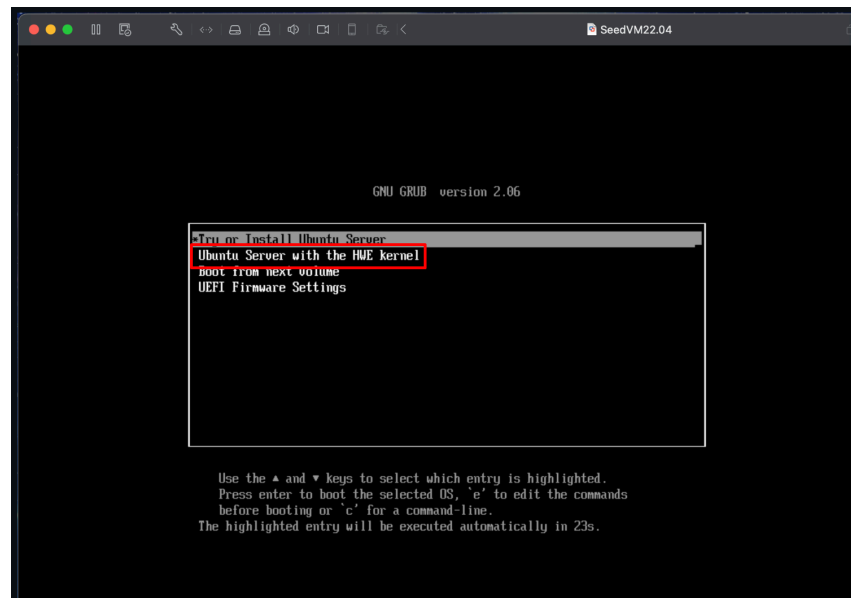

- Open an account in Broadcom and from there find the vmware fusion. The link above provides a step by step guide. <https://access.broadcom.com/default/ui/v1/signin/>
- You can also follow this video <https://youtu.be/0Hp-5ZYJI6A?si=XB-nm-9Oag826DZQ>

Step 2: Ubuntu Installation:

1. Follow these steps very carefully

https://github.com/seed-labs/seed-labs/blob/master/lab-setup/apple-arm/seedvm-v2/SeedVM-Ubuntu_Installation.md

- After installation if you face screen freezing or black screen error on boot, delete the seed vm.
window>virtual machine library>find vm>delete
- Then do a fresh install but this time select this option : *ubuntu server with the HWE kernel*

Step 3: Lab Setup:

1. Follow the lab setup guide here:

https://github.com/seed-labs/seed-labs/blob/master/lab-setup/apple-arm/seedvm-v2/SeedVM-Lab_Setup.md
